RC-SLM

# SYSTEM LIFECYCLE MANAGEMENT

## Objective

Control, support and integrate all processes required for GxP compliance of automated systems, incl. laboratory equipment, production equipment, information systems, IT infrastructure, utilities and facilities.

## Main functionality

Products are available per system compliance process, which has the following advantages:

- System compliance processes can be integrated to improve efficiency
- Integration and automation of the various processes enables paperless compliance
- The system can be integrated with any existing system within the company that is involved in system compliance
- The various products allow for a phased-roll out

*Each product can be configured according to the company's compliance approach and needs. RC-SLM and our other solutions are part of RC-QMS, Rescop's comprehensive Quality Management Suite.*

## Benefits

Permanent inspection readiness:

- In control of systems through an up-to-date overview on the company's systems, their configuration, their compliance state and (progress of) compliance processes
- Automated scheduling and triggering compliance activities
- Documentation in line with changing system through integrated configuration management and Change Control
- Traceability through automated linking of activities, deliverables and content

- Consistent and adequate execution of compliance processes through standardisation of approach, documentation and content
- Centrally and readily retrievable documentation
- Management Reporting

Efficient compliance processes:

- Automated workflow for review and approval
- Integration of compliance processes
- Re-use of deliverables and content
- Risk-based approach and decision mechanism
- Central point for storing and sharing compliance documentation and knowledge
